I- ((Reading Comprehension)) (101 Words)

4

Read the following passage, then answer the questions below:

Polar bears will be extinct by the end of the 21st century if the global warming continues. Temperatures are rising in the Arctic. It is the only place where polar bears are found. This change of nature is having a strong effect on the health and numbers of the world's population of polar bears.

During the winter, polar bears live and hunt on the sea ice. They travel for many kilometers to catch their main food, which is the seal. Through the ice, they can feel the movement of a seal. They sit close to a hole in the ice and wait for the seal to come up for air. In summer, as the ice melt, some bears return to the shore, fasting until the colder weather and sea ice return. Others continue to hunt. They swim in the icy water until they reach floating sea ice where they can wait for a seal. Bears who have been fasting all summer weigh less and are weak. They have lost too much of their fat, which is needed to keep them warm and as a source of energy.

Global warming has increased the temperature in the Arctic so much that the warmer weather comes sooner each year and it lasts longer .It has been predicted that by the end of this century there will be no sea ice left. As the temperature continues to rise the cold winter will be much shorter.

A-Choose the correct answer from a, b, c and d : (2×1=2m)

1-The best title for the passage could be

a- Global warming.

b- The 21st Century summer

c- Temperature of Arctic

d- Life in the Arctic
