VI- Reading Comprehension (110 Marks)

Read the following passage carefully, then answer the questions below :

Doctors say that there are several kinds of headaches. Each kind begins in a different place and needs different treatment. Some of these headaches start with a change in vision or sight. The person sees wavy lines, black dots, or white spots in front of the eyes. This is a warning that a headache is coming. The headache occurs on only one side of the head. The vision is blurred, and the person may vomit from the pain. These headaches are called the migraine headaches. They are more frequent in women than men. Sleep is the best cure for **them** .

Cluster headaches, which also start in the arteries, are called cluster headaches because they come in clusters or groups. A cluster headache lasts only for two hours and then goes away. At the beginning of the cluster headache, the eyes become red and watery . There is a steady pain in the head. Men have more cluster headaches than women do .

The muscle headache, which starts in the muscles in the neck or forehead, is caused by tension. When the person becomes nervous about something, or has problems at work, school or home, the neck and head muscles become tense and the headache starts. A muscle headache usually starts in the morning and gets worse as the hours pass. There is a steady pain, pressure and a bursting feeling. Usually, Aspirin doesn't help in muscle headaches.

How do doctors treat headaches? If a person has frequent headaches, the doctor first has to decide what kind they are. Medicine can help, but there are other ways to treat them . The doctor asks the patient to analyse his or her daily living patterns. A change in diet or an increase in exercise might stop the headaches. If the patient realises that difficulties at home, work or school are causing the tension, it might be possible to make changes and decrease these problems.

Psychological problems and even medicine for another physical problem can cause headache. The doctor has to discuss and **analyze** all these patterns of the patient's life. A headache can also be a signal of a more serious problem, so, patients should realize that there is no magic cure for headaches. However, doctors can control most of them .

A- From a, b, c and d choose the correct answer:

1. Which of the following would be **the best title** of the passage?
 - a) Headaches: Types and Treatments
 - b) Research About Headaches
 - c) Experimented Cures and Treatments
 - d) Dangerous and Fatal Headaches

2. The underlined word "**analyze**" in the **5th paragraph** is closest in meaning to:

- a) fight
- b) shake
- c) complete
- d) diagnose

3. The underlined word "**them**" in the **1st paragraph** refers to:

- a) women
- b) men
- c) migraine headaches
- d) white spots

4. One of the following statements could be understood from the **1st paragraph**:

- a) All headaches are of the same type and treatment.
- b) All headaches start in the same place but need different treatment.
- c) Headaches have various types and different treatments according to their types.
- d) Headaches, that are called migraine headaches, could only be cured by sleep.

5. What is the purpose of the author in writing this passage?

- a) To inform us about various types of headaches and their treatment.
- b) To show us how migraine headaches are treated in women.
- c) To warn us against the effects of tensions at work, school, or home.
- d) To advise us about the best ways to analyse our daily routines.

B- With reference to the passage, answer the following questions:

6. Why should patients realise that there is no magic cure for headaches?

.....
.....

7. What are the symptoms of Cluster headaches?

.....
.....

8. What should a person do if he/she has frequent headaches?

.....
.....

9. How do doctors diagnose the various types of headaches?

.....
.....

II- Read the following passage carefully, then answer the questions below:

How many things can you see in the night sky? On a clear night you might see the Moon, some planets, and thousands of sparkling stars. You can see even more with a telescope. You might see stars where before you only saw dark space. With bigger and better telescopes, you can see more and more objects in the sky. And you can see those objects in more and more detail.

But scientists believe that there are some things in the sky that we will never see even with the biggest telescope in the world. That is because they are invisible and **mysterious**. They are dead stars which are called black holes. You might find it hard to imagine that stars die. After all, our Sun is a star. Year after year we see it up in the sky, burning brightly, giving us heat and light. The Sun certainly doesn't seem to be getting old or weak. But stars do burn out and die after billions of years.

As a star's gases burn, they give off light and heat. But when the gas runs out, the star stops burning and begins to die. As the star cools, the outer layers of the star pull in toward the centre. The star squashes into a smaller and smaller ball. If the star is very small, it ends up as a cold, dark ball called a black dwarf. If the star is very big, **it** becomes lesser and lesser until it's packed together tighter than anything else in the universe.

Imagine if the Earth were crushed until it was the size of a tiny marble. That's how tightly this dead star, a black hole, is packed. What pulls the star in toward its centre with such power? It's the same force that pulls you down when you jump – the force called gravity. A black hole is so tightly packed that its gravity sucks in everything, even light. The light from a black hole can never come back to your eyes. That's why you see nothing but blackness. So, the next time you stare up at the night sky, remember: There's more in the sky than meets the eye!

From a, b, c and d, choose the correct answer:

1. The best title for the passage is:

- a) Black Holes
- b) The Burning Sun
- c) The Force of Gravity
- d) The Tiny Marble

2. The underlined word "**it**" in paragraph **three** refers to:

- a) dwarf
- b) star
- c) center
- d) ball

3. The synonym of the underlined word "**mysterious**" in paragraph **two** is:

- a) huge
- b) ordinary
- c) strange
- d) colourful

4. The black hole doesn't reflect light because:
- The star is giving off heat and light when its gases burn.
 - The layers of a star are pulled outwards when it cools.
 - Most black holes are very far from the Earth.
 - The gravity of the black hole pulls the light inside it.
5. According to paragraph two, what are black holes?
- They are invisible dead stars.
 - They are big stars in size.
 - They are stars which give us heat and light.
 - They are tiny stars which we can see with a telescope.

B) With reference to the passage, answer the following questions:

6. "There's more in the sky than meets the eye!" What does the writer mean?

.....

.....

7. How many things can you see in the night sky?

.....

.....

8. What is a black dwarf?

.....

.....

9. What is the writer's purpose of writing this passage?

.....

.....

Model Answers

VI- Reading Comprehension (110 Marks)

Read the following passage carefully, then answer the questions below :

Doctors say that there are several kinds of headaches. Each kind begins in a different place and needs different treatment. Some of these headaches start with a change in vision or sight. The person sees wavy lines, black dots, or white spots in front of the eyes. This is a warning that a headache is coming. The headache occurs on only one side of the head. The vision is blurred, and the person may vomit from the pain. These headaches are called the migraine headaches. They are more frequent in women than men. Sleep is the best cure for them .

Cluster headaches, which also start in the arteries, are called cluster headaches because they come in clusters or groups. A cluster headache lasts only for two hours and then goes away. At the beginning of the cluster headache, the eyes become red and watery . There is a steady pain in the head. Men have more cluster headaches than women do .

The muscle headache, which starts in the muscles in the neck or forehead, is caused by tension. When the person becomes nervous about something, or has problems at work, school or home, the neck and head muscles become tense and the headache starts. A muscle headache usually starts in the morning and gets worse as the hours pass. There is a steady pain, pressure and a bursting feeling. Usually, Aspirin doesn't help in muscle headaches.

How do doctors treat headaches? If a person has frequent headaches, the doctor first has to decide what kind they are. Medicine can help, but there are other ways to treat them . The doctor asks the patient to analyse his or her daily living patterns. A change in diet or an increase in exercise might stop the headaches. If the patient realises that difficulties at home, work or school are causing the tension, it might be possible to make changes and decrease these problems.

Psychological problems and even medicine for another physical problem can cause headache. The doctor has to discuss and **analyze** all these patterns of the patient's life. A headache can also be a signal of a more serious problem, so, patients should realize that there is no magic cure for headaches. However, doctors can control most of them .

A- From a, b, c and d choose the correct answer:

- Which of the following would be **the best title** of the passage?
 - Headaches: Types and Treatments**
 - Research About Headaches
 - Experimented Cures and Treatments
 - Dangerous and Fatal Headaches
- The underlined word "**analyze**" in the **5th paragraph** is closest in meaning to:
 - fight
 - shake
 - complete
 - diagnose**

3. The underlined word "**them**" in the **1st paragraph** refers to:

- a) women
- b) men
- c) **migraine headaches**
- d) white spots

4. One of the following statements could be understood from the **1st paragraph**:

- a) All headaches are of the same type and treatment.
- b) All headaches start in the same place but need different treatment.
- c) **Headaches have various types and different treatments according to their types.**
- d) Headaches, that are called migraine headaches, could only be cured by sleep.

5. What is the purpose of the author in writing this passage?

- a) **To inform us about various types of headaches and their treatment.**
- b) To show us how migraine headaches are treated in women.
- c) To warn us against the effects of tensions at work, school, or home.
- d) To advise us about the best ways to analyse our daily routines.

B- With reference to the passage, answer the following questions:

6. Why should patients realise that there is no magic cure for headaches?

Because headaches can be a signal of more serious problems.

7. What are the symptoms of Cluster headaches?

- **Cluster headaches start in the arteries.**

- **Eyes become red and watery.**

- **A steady pain in the head occurs.**

8. What should a person do if he/she has frequent headaches?

He/ she should consult a doctor to decide what kind they are and then receive the suitable treatment/cure.

9. How do doctors diagnose the various types of headaches?

Doctors ask the patient to analyse his or her daily living patterns, determine the type of headache, physical or psychological, then give the suitable cure.

II- Read the following passage carefully, then answer the questions below:

How many things can you see in the night sky? On a clear night you might see the Moon, some planets, and thousands of sparkling stars. You can see even more with a telescope. You might see stars where before you only saw dark space. With bigger and better telescopes, you can see more and more objects in the sky. And you can see those objects in more and more detail.

But scientists believe that there are some things in the sky that we will never see even with the biggest telescope in the world. That is because they are invisible and **mysterious**. They are dead stars which are called black holes. You might find it hard to imagine that stars die. After all, our Sun is a star. Year after year we see it up in the sky, burning brightly, giving us heat and light. The Sun certainly doesn't seem to be getting old or weak. But stars do burn out and die after billions of years.

As a star's gases burn, they give off light and heat. But when the gas runs out, the star stops burning and begins to die. As the star cools, the outer layers of the star pull in toward the centre. The star squashes into a smaller and smaller ball. If the star is very small, it ends up as a cold, dark ball called a black dwarf. If the star is very big, **it** becomes lesser and lesser until it's packed together tighter than anything else in the universe.

Imagine if the Earth were crushed until it was the size of a tiny marble. That's how tightly this dead star, a black hole, is packed. What pulls the star in toward its centre with such power? It's the same force that pulls you down when you jump – the force called gravity. A black hole is so tightly packed that its gravity sucks in everything, even light. The light from a black hole can never come back to your eyes. That's why you see nothing but blackness. So, the next time you stare up at the night sky, remember: There's more in the sky than meets the eye!

From a, b, c and d, choose the correct answer:

1. The best title for the passage is:

- a) **Black Holes**
- b) The Burning Sun
- c) The Force of Gravity
- d) The Tiny Marble

2. The underlined word "it" in paragraph **three** refers to:

- a) dwarf
- b) **star**
- c) centre
- d) ball

3. The synonym of the underlined word "mysterious" in paragraph **two** is:

- a) huge
- b) ordinary
- c) **strange**
- d) colourful

4. The black hole doesn't reflect light because:

- a) The star is giving off heat and light when its gases burn.
- b) The layers of a star are pulled outwards when it cools.

Model Answers

VII- Summary Making

Read the following passage, then do as required:

Beavers are one of the most interesting animals in the world because of their architectural skills. To build their houses, a beaver first carefully selects a location. Usually, beavers choose a place that is close to their food source. Beavers use their teeth to cut down trees and drag them to their building location. No wonder, the idioms “busy as a beaver” and “eager beaver” are synonymous with being industrious and hardworking. Then, they chew on the wood to break it into smaller pieces and start making piles. They use their hands to squish mud between the logs and smack the logs and mud with their tail to make sure everything is sturdy. A beavers’ house is called lodge.

In FOUR sentences, summarize and paraphrase the following passage in an answer to the following question:

How do beavers build their houses?

Beavers choose a place near food. They cut down trees and move them.

They break the wood into small pieces. They use mud and their tails to build a strong lodge.

II- In FOUR sentences, summarize and paraphrase the following passage in an answer to the following question: How to hand in assignments on Microsoft Teams?

Microsoft Teams is a popular tool for remote learning. Millions of teachers and students worldwide rely on Teams. Speaking of assignments, if you are not sure what are the steps to follow to turn in assignments in Microsoft Teams, this guide is for you. You just go to your classroom team to select the General channel. The list of your assignments will appear on the screen, so click on Assignments. It is filtered by the due date. You will know what assignments

are urgent and which can wait. Select your assignment card, open it and check the assignment details. To hand in documents and files related to your assignment, click on the Add work button and upload your files.

Go to your classroom team and open the General channel.

Click on Assignments to see your tasks.

Choose your assignment and check its details.

Click Add work and upload your files.

III- Read the following passage then do as required:

Many parents worry about how exposure to technology might affect teenagers developmentally. Experts agreed that the best thing parents can do to minimize the risks associated with technology is to curtail their own consumption first. It's up to parents to set a good example of what healthy computer usage looks like. Kids should be used to seeing our faces, not our heads bent over a screen. Establish technology-free zones in the house and technology-free hours when no one uses the phone, including mom and dad. In the morning, get up a half hour earlier than your kids and check your email then. Give them your full attention until they're out the door. And neither of you should be using phones in the car to or from school because that's an important time to talk.

In a paragraph of FOUR sentences ONLY, summarise and paraphrase the previous passage in answer to the following question:

How can parents help their children avoid the bad effects of new technology?

Parents can help by reducing their own use of technology and setting a good example. They should create technology-free times and places at home. They need to give their children full attention and talk with them more. They should also avoid using phones during important times like mornings and car rides.
