**-Read the following passage carefully, then answer the questions below:**

On 3<sup>rd</sup> April 1973, Martin Cooper from the Motorola Company talked on his mobile phone as he walked through the streets of New York. People watched with excitement and amazement. At that time, even normal phones were attached by wires and cords and people had never seen anything like it before! It was the world's first mobile phone call. The phone weighed 850 grams! It was very heavy! Now, mobile phones weigh about 130 grams.

In the 1970s, mobile phone technology was still experimental. Mobiles weren't **available** to the public until 1983, when the DynaTAC was created. This mobile phone was not successful. It was huge, you could use it only for 30 minutes and it was also expensive. Only very rich people can buy it. Martin Cooper had a dream of people taking their phones with them, and being able to communicate wherever **they** were. However, in the early days, nobody knew if the mobile phones would be popular. By the end of the year 2000, mobiles were cheap enough for ordinary people to buy. They were also much smaller and looked much better than the DynaTAC! Millions of people were using them.

Mobile phones have changed a lot since 1980s. We can use them to take photos, watch videos, surf the internet and do many other things. Today there are billions of mobile phones in the world. Life would be very different without mobile phones- They have changed the world as we know it!
