**Reading Comprehension**

**Read the following passage then answer the questions below:**

Have you ever been outside in the middle of July and seen swarms of dragonflies? Of all the flying insects, dragon flies just might be the most charming and beautiful. Dragonflies are large and strong. They have big, compound eyes, which means that each eye is made up of thousands of tiny eyes, allowing the dragonfly to see in all directions. Their large wings are always held out straight, both while in flight and while resting.

Dragonflies hunt, catch and eat insects. They are **harmless** to humans; they don't bite or sting. In fact, you could even say that they are helpful, since they eat the insects that tend to annoy us the most, like mosquitoes and flies.

Dragonflies live in most parts of the world, but they prefer to live near ponds and lakes. They like warm weather; in fact, you won't see **them** at all until temperatures reach at least the mid-60s. They need to warm up in the sun during the mornings before they take off.

The dragonfly is a great flyer .They can even fly backwards. As insects, they have six legs, but their long, heavy bodies and long wings make walking difficult for them, so they do almost everything mid-flight.

**Reading Comprehension**

**Read the following passage carefully, then answer the questions below:**

Plants and animals need to survive in our wild world. How do they do it? There are many ways for plants and animals to live in our world.

The body or skin of some animals is similar in colour to the land around them. Some animals are brown just like the colour of trees so other animals and hunters cannot see them. Some animals can really change colours to match the place around them. Rabbits are a great example of this. Some rabbits' fur will change colours in different seasons. **They** are brown in the spring, summer, and autumn to match the trees. They become white in the winter when there is snow. This way the rabbit is safer from wild animals and hunters the whole year.

Plants survive in deserts, forests, and the Arctic. Desert plants collect, **store**, and save water for long time. Some plants have roots that get water very quickly. The water is saved in the centre of the plant. Other plants make chemicals that keep insects and animals from eating them. The poison stops the seeds of other plants from growing. It may even kill other plants that are already growing. Some plants make poisons that can kill a person.

## Reading Comprehension

### Read the following passage, then answer the questions below:

Jack was excited because his new furniture was going to be delivered the next day. Before the furniture came, he and his parents were ready to paint his room. Jack had picked out the colours. He and his parents put on old clothes and got out paint rags and cleaner to get ready for the big job.

They used rollers to paint the walls. Rollers made the paint go on evenly and quickly. But they used brushes for the corners and the edges. That way, paint wouldn't get on the ceiling or the floor. After a few hours, the first coat of paint was getting dry. Jack wanted to put the second coat on right away, but his dad explained that the paint would dry better if they waited. When dinner was over, Jack hurried back to his room and got started.

The next morning, the paint in Jack's room was finally dry. The furniture was delivered right after lunch, and Jack couldn't wait to see what it looked like. Jack and his parents assembled the furniture. Jack and his parents were exhausted when they finished because they did a lot of hard work. Jack looked around. "This is great!" he exclaimed. Jack added. "But I'm glad we did it."
