Space Exploration

Introduction: The future of Humans, and the future of Earth, depends on Space Exploration.

In my essay, I am going to argue about the arguments for and against space exploration.

Body 1 : **The arguments for space exploration:**

- Many benefits (spin-offs)
- Aircraft technology
- Wireless technology

Body 2: **The arguments against space exploration:**

- Facing many dangers
- Facing health problems
- Expensive and dangerous

Conclusion: **Personally, I am for space exploration.**

The topic

The future of humans, and the future of Earth, depends on space exploration. In my essay, I am going to write about the arguments for and against space exploration.

On the one hand, there are a lot of examples of the effects of space technology on human lives on the Earth. The first example is Aircraft Technology. Space Technology has made aircraft lighter, faster, and more economical. The second example is Wireless technology. There are a lot of benefits we could get from space technology such as Satellite Television, Weather forecasting, GPS, Mobile phones, Air-conditioning units, sunglasses, trainers, etc. All these inventions are called "**spin-offs.**"

On the other hand, the astronaut faces many risks in his work field. The shortage of air is the first problem. Another difficulty he might face is health problems such as thin bones. **Moreover,** space travel is extremely expensive, requires huge amounts of energy and is very dangerous.

To sum up, without all these inventions, mankind would shift one or two centuries back. Space exploration moves us forward. **Personally,** I am for space exploration.
